## 1,配置maven打包命令

A screenshot of an IDE's project explorer and a context menu. The project explorer on the left shows a project structure with folders like 'src', 'config', 'dev', 'pdt', 'uat', 'main', 'java', and 'resources'. A context menu is open over the 'src' folder, with 'Run As' selected. A sub-menu is displayed, listing various build and development actions. In this sub-menu, '6 Maven build...' is highlighted with a red rectangle. Other visible options include '2 Java Applet', '3 Java Application', '4 JUnit Test', '5 Maven build', '7 Maven clean', '8 Maven generate-sources', '9 Maven install', 'Maven test', 'Run with Jetty', and 'Run Configurations...'. The 'Run As' menu also includes options like 'Import', 'Export', 'Refresh', 'Close Project', 'Close Unrelated Projects', 'Validate', 'Show in Remote Systems view', 'Profile As', 'Debug As', 'Team', 'Compare With', 'Replace With', 'Restore from Local History...', 'Maven', and 'Java EE Tools'.

## 填写name和执行的命令.然后run执行

This is an identical screenshot to the one above, showing the same IDE project structure and context menu. The 'Run As' menu is open, and the sub-menu is displayed with '6 Maven build...' highlighted by a red rectangle. The overall layout and content of the image are the same as the previous one.

Paste\_Image.png

A small, square icon located in the bottom right corner of the page. It features a stylized, interconnected circular design, possibly representing a network or a specific application feature.

控制台没有error信息,则会在target下生成war包(使用resin部署则解压下即可).  
注:如果有error信息,则根据error信息排查问题.部分项目可能会在test目录下的class报错.  
请删除test/java下的文件.

pom.xml

```
<plugin>
  <artifactId>maven-war-plugin</artifactId>
  <configuration>
    <version>3.0</version>
  </configuration>
  <!-- 配置其他需要打包进去的目录 -->
  <webResources>
    <resource>
      <!-- 需要包含进来的其他目录,开发环境用dev,测试用uat,生产用pdt-->
      <directory>src/config/dev</directory>
      <!-- 打包的目标目录 -->
      <targetPath>WEB-INF/classes</targetPath>
    </resource>
    <!-- 不打包test目录下的文件 -->
    <resource>
      <directory>src/test</directory>
      <excludes>
        <exclude>*</exclude>
      </excludes>
    </resource>
  </webResources>
  <failOnMissingWebXml>>false</failOnMissingWebXml>
</plugin>
```
